

Co-Working space seat booking application.

## **Description**

You are invited to develop a web application based on the [Figma](#) design provided. Your primary goal is to create a functional, responsive, and aesthetically pleasing web application adhering to all current web standards, using the React framework.

## **Requirements.**

Using the design provided in [Figma](#) and data provided on [Github](#) create the application with the following requirements

1. The application is to be developed using React + Typescript.
2. Application pages must be as per the Figma design.
3. Even though it is a small application, the application state is to be implemented using a state management system for your choice.
4. The Application should be responsive and run well on devices, Phones, Tablets and Desktops.
5. You are free to use any design library / framework as a base for design.
6. Center's data coming in from GitHub must be treated as API response.
7. Finally deploy the application using any static hosting of your choice.
